

## **Policy Brief: Behavioral Infrastructure, Why Policy Must Measure Kindness and Cohesion**

Muhammad Said (A professor at Syarif Hidayatullah State Islamic University), Safaa Alhamaydeh (Senior Consultant of International Affairs and Social Entrepreneurship), Nanang Subana Dirja (CEO of Islamic Relief Indonesia), Azlena Maria Abu Bakar (Co-Founder & CEO, World Kindness Trust), Minal D'Rozario (Managing Director, World Kindness Trust), and Rehan Tareq (PhD Candidate on Entrepreneurship and Innovation at Universiti Sains Malaysia)

These brief extracts the core arguments from the Global Forum on Social Entrepreneurship, Policy, and Sustainability, focusing on key statements about the transition from an old economic model to a sustainable, human-centered ecosystem.

### **I. The Necessity of the Ecosystem Shift**

The foundational challenge is moving from an "I-system" to an "Ecosystem."

- The current economic story has produced exhaustion, exclusion, and ecological collapse.
- The planet is asking us to upgrade our story.
- In the old model, the question is, "How much can I take?" In the new model, the question becomes, "How much can we together regenerate?"
- Success must be profoundly human-centered and sustainable.
- This shift requires the meeting of entrepreneurship, policy, and sustainability in a "golden triangle."

### **II. Conscious Entrepreneurship and Redefined Value**

Entrepreneurship must become a conscious practice that integrates values, impact, and long-term consequences.

- Consciousness is infrastructure; without it, even the best technology will just reproduce the same old problems.
- Every business model is a climate model, a social model, and a psychological model.
- Entrepreneurs must ask if the world will truly be a better place if their business grows, not just if there is a market for the product.
- Value must be measured by four dimensions: People, Planet, Purpose, and Profit.
- The companies that will truly thrive in the coming decades are those that integrate head, heart, and planet.
- Young people do not want to choose between doing well and doing good; our responsibility is to make both possible.

### **III. Policy as Strategic Architecture for Trust and Behavior**

Policy must act as the invisible architecture that defines what is rewarded and what is too expensive to ignore.

- Wise policy sends a clear market message: Regeneration is profitable; exploitation has a heavy cost.
- Policy can be a wall that blocks the future or a bridge that carries us in the future faster and safer. Today, we need bridges.
- Sustainability is behavioral, not only environmental.
- Human behavior is strategic infrastructure, not "soft tissue."
- Social breakdowns cost more than policy failure; they just don't appear on balance sheets.
- Trust is not an accident; it is engineered and consciously cultivated through systems.
- The nations that will endure this century will be the most cohesive, trusted, and emotionally literate.
- We must measure behavior like infrastructure and treat kindness as a strategic intelligence.

### **IV. Actionable Invitations**

The forum issued three specific invitations to leaders across sectors:

1. For Entrepreneurs and Business Leaders: Dare to build companies that your grandchildren will be proud of. Ask in every strategic meeting: "How does this decision move us from an I-system to an Ecosystem?"
2. For Policymakers and Public Leaders: Dare to write laws that protect what cannot be replaced (e.g., public trust, clean water, mental health). Make it easy and profitable for entrepreneurs to do the right thing.
3. For Educators and Ambassadors of Sustainability: Dare to place consciousness at the center of your work, because without a change in awareness, no policy will be enough.

The future is not a place to discover; it is a place that we can design and recreate together.
